

Safely Remove Hazardous Products from Your Home!

Every year, U.S. residents generate over **one billion pounds of hazardous household products**. Throwing these products in the trash or down the drain can negatively impact our community's health and safety.

Prevent exposure and safely manage these products for free in the Village of Sherburne.

Paint

Paint is highly reusable and recyclable. Prevent environmental contamination by ridding your garage of old paint the responsible way.

Pharmaceuticals

Prevent accidental poisonings, substance abuse, and environmental contamination by dropping off your leftover medications (prescription and over-the-counter) at a take-back location.

Thermostats

Many older thermostats contain mercury, a neurotoxin that harms the heart, brain, immune, and nervous systems. Mercury also contaminates waterways and fish, and can make its way into your food.

Pesticides

Improper disposal of these chemicals can harm human health by negatively impacting the brain and reproductive systems. Pesticides also contaminate waterways and soil.

Batteries

Prevent hazardous metals from entering the waste stream and negatively impacting human health, waterways, and soil.
